

**MASTER CLASS**

# Mastering Enterprise Governance Framework & Architecture

This Master Class introduces Cobit®5, the latest iteration of the globally-recognised enterprise governance framework for the management of IT in organisations, and demonstrates how to apply it to create optimal value for internal and external stakeholders.

**TOPICS COVERED**

- Cobit®5 Overview
- Five Key Principles of Cobit®5
- Seven Categories of Enablers
- Process Reference Model
- Generic Enabler Model
- *Workshop 1: Meeting Stakeholder Needs*
- Balance Scorecard
- Single Integrated Framework

**WHY YOU SHOULD ATTEND**

Upon completion of this course, you will gain a masterful insight into the latest iteration of Cobit®5, the globally-recognised enterprise governance framework, developed by ISACA®, which helps organisations meet business challenges in the areas of regulatory compliance, risk management and aligning IT strategy with organisational goals. Cobit®5 incorporates the management techniques within the context of the IT Architecture Body of Knowledge (Iasa ITABoK, a collection of the world's proven best practices in IT architecture). Learn the key principles of Cobit®5 and the best way to utilise it in creating business value from IT by maintaining a balance between realising benefits and optimising risk levels and resource use. In this course, you will learn to address both business and IT functional areas across an enterprise, as well as meeting the IT-related interests of both internal & external stakeholders needs.
