- Human Dynamics Foundational Skills
- *Group Discussion 4*: Human Dynamics & Behaviors Pattern test
- Class Activity – Applying ITABoK Skills using Lego as Building Blocks
- Design Foundational Skills
- IT Governance in a Nutshell

**WHY YOU SHOULD ATTEND**

Upon completion of this course, you will gain a masterful insight into EA, and how it brings together business & IT integration to deliver enterprise capabilities through technology investment. EA is becoming the fastest-growing and in-demand management principle that is now defining effective and sustainable IT adoption in organisations. IT roles have changed in the last decade from a business enabler to a strategic necessity that helps enterprises improve their business capabilities. In this course, you will learn the building blocks of EA, various aspects on establishing EA to drive business capabilities, EA best practices and strategic skill sets, as well as how to derive actual business values in the form of return-on-investment of IT architecture.
